

Innovation

MAKE A
CHANGE
MAKE A
DIFFERENCE

What is innovation?

Innovation means to introduce something new

You probably recognise innovations that comprise new product ideas and technologies (inventions) e.g. new drugs, medical devices and software BUT innovation can include all manner of ideas including redesign of a care pathway, a new technique or procedure or even improvements in administrative processes.

Being innovation can also involving adopting good ideas from elsewhere.

Supporting innovation activity is important to the Royal as it enables improvements to be made in the quality of healthcare provided, as well as providing routes to improving efficiency and productivity.

Seminar

Trust Staff are invited to attend a seminar that will provide a basic introduction to Innovation and support at the Royal:

- What is innovation?
- When does it involve an invention and IP?
- Why is it important and what benefits can it have for patient care and the Royal?
- The innovation pathway
- Examples of innovation
- What support is available?

Dates: Weds 30th April 2014, 10am -11am

Venue: Seminar Room, Clinical Research Facility, 2nd Floor UCD

Register via Tracy.Burgess@rlbuht.nhs.uk or 0151 706 3756

IMPACT
SCIENCE

Impact Science (part of 2Bio Ltd) is contracted to provide support to the Royal's Innovation Framework and to support commercialisation of its intellectual property (IP) portfolio. Impact Science's team of innovation specialists help to identify innovation projects and potential IP, evaluate the feasibility of implementing or commercialising the idea and develop a plan for further developing, testing and sharing of the idea. For commercial opportunities we actively manage the process of commercial engagement.
